## PROFILE

Highly skilled Backend & Full Stack Developer with 3+ years of industrial experience, specializing in Node.js, Nest.js, Express, and the MERN stack. I have extensive experience designing and developing scalable backend systems, building RESTful and WebSocket APIs, integrating third-party services, and managing PostgreSQL, MySQL, MongoDB, and MSSQL databases. Experienced in real-time communication using Socket.IO , secure authentication with JWT, and deploying applications.
I also have hands-on experience with cloud infrastructure (AWS), server management, and performance optimization to ensure high availability and scalability. Comfortable working in fast-paced environments, collaborating with cross-functional teams, and delivering end-to-end solutions.
Passionate about building robust, high-performance applications, I thrive on solving complex problems, integrating diverse systems, and continuously learning new technologies to deliver reliable and scalable solutions.

## PROFESSIONAL EXPERIENCE

**Full Stack Developer** 10/2025 – Present
*Leo's International* Islamabad/Pakistan

- Full Stack Developer responsible for managing servers, deployments, and infrastructure for *LeosApp* and the *Prive Community Platform*.
- Designed and developed scalable RESTful APIs with JWT-based authentication, role-based access control (RBAC), and efficient database management using PostgreSQL and MongoDB.
- Configured and maintained Linux-based production servers using Nginx as a reverse proxy and PM2 for process management, ensuring high availability, performance optimization, and smooth deployments across multiple environments.
- Implemented real-time features using Socket.IO and collaborated closely with frontend teams to ensure seamless API integration and enhanced user experience.
- Contributed to the development of a Broker Management System, enabling efficient onboarding and management of property brokers, including integrations with Zoho CRM and WhatsApp for streamlined communication and lead handling.
- Played a key role in the Leos Mobile Application Backend, supporting customer workflows such as unit purchases, installment tracking, and payment-related processes through secure and scalable backend services.
- Managed cloud infrastructure and deployments on AWS, including handling server provisioning, pricing considerations, and scaling requirements using multiple instances and load balancing strategies.
- Led a small team of 4–5 developers, acting as a Technical Lead / PMO, coordinating tasks, resolving technical challenges, and ensuring timely delivery of features.
- Acted as a bridge between stakeholders, including clients and internal management, handling communication, gathering requirements, and proactively resolving issues to maintain project alignment and delivery efficiency.

**Backend Engineer** 05/2025 – 10/2025
*Fexen Smart Solutions — Extsy Platform* Islamabad/Pakistan

- Developed backend services for Extsy, a Binance-like trading platform supporting spot, futures, demo, and copy trading features.

- Built and managed a multi-wallet system with integrations across multiple blockchain networks, including Ethereum, Arbitrum, Optimism, and Bitcoin, leveraging third-party providers for secure transaction handling.
- Integrated Binance WebSocket and REST APIs to enable real-time market data, live charts (e.g., BTC/USDT), and seamless order execution similar to production trading platforms.
- Implemented KYC verification using Sumsub, along with robust authentication mechanisms including JWT, MFA, and 2FA to ensure platform security and compliance.
- Worked extensively on real-time systems using Socket.IO , enabling live trading updates, wallet activity tracking, and responsive user experiences.
- Contributed to crypto-based virtual card integration, enabling users to perform transactions backed by digital assets.
- Focused on building scalable backend architecture using Node.js, NestJS, PostgreSQL, and MongoDB, while efficiently handling multiple third-party integrations.
- Deployed and managed backend services on AWS, handling version control via GitHub and ensuring reliable production environments.
- Collaborated with senior developers and occasionally took on Technical Lead responsibilities, guiding implementation decisions and supporting team members in complex integrations.

**MERN Stack Developer** 05/2023 – 05/2025
*App In Snap* Islamabad/Pakistan

- Designed, developed, and maintained robust backend systems using Node.js, NestJS, and Express, integrating both REST and SOAP APIs.
- Analyzed complex system specifications to determine requirements and enhance existing programs for better performance and maintainability.
- Proactively identified and resolved technical challenges, ensuring high system performance, scalability, and reliability.
- Worked extensively with Node.js, Express, MongoDB, MySQL, MSSQL, and PostgreSQL for backend development, and React.js for frontend development.
- Implemented secure authentication and authorization using JSON Web Tokens (JWT) with relational and NoSQL databases for secure data management.
- Leveraged socket-based communication (Socket.IO ) to build real-time features and live updates in applications.

## EDUCATION

**Bachelors in Computer Science** 01/2019 – 02/2023
*Bahria University* Islamabad/Pakistan
Completed a full undergraduate program in Computer Science, building a strong foundation in software development, algorithms.

## SKILLS

- HTML5, CSS3, SCSS, Tailwind CSS
- TypeScript
- REST & SOAP APIs, WebSockets, Socket.IO
- API integration (Fetch, Axios)
- Background jobs, Cron jobs, API rate limiting
- TypeORM, Sequelize, Prisma
- Firebase Cloud Messaging (FCM)
- CI/CD: Azure DevOps, GitHub Actions
- Zoho integrations
- JavaScript (ES5/ES6), React.js
- Node.js, Express.js, Nest.js
- JWT, OAuth, API security (CORS, Helmet)
- Microservices architecture, Redis caching
- MongoDB, PostgreSQL, MySQL, MSSQL
- Stripe, PayPal, Zindigi (Z-Connect APIs)
- Linux server management, Nginx, PM2
- Git, GitHub, Netlify, Microsoft Azure

## PROJECTS

**Extsy – Trading Platform | Backend Developer**
*Backend Developer*
Worked on Extsy, a full-scale multi-feature trading platform supporting spot, futures, demo, and copy trading functionalities. Architected and developed a scalable wallet system with support for multiple blockchain networks, enabling secure asset management, deposits, and withdrawals. Implemented real-time trading features using Binance WebSocket APIs for live market data streaming and order updates, while integrating Binance REST APIs for reliable trade execution and account operations.
Designed backend modules to handle high-frequency trading scenarios with a focus on performance, data consistency, and fault tolerance. Contributed to the development of a virtual card platform, ensuring seamless transaction handling and integration with external payment services. Integrated KYC verification using Sumsub, automating user identity validation and ensuring compliance with regulatory standards.

Collaborated across teams to deliver end-to-end backend solutions, optimizing system performance, improving scalability, and enhancing overall user experience through efficient API design and robust system architecture.

**J-ACE – Banking & Remittance System**
*Secure banking and remittance system*
I led the backend development of J-ACE, a banking and remittance system for JS Bank that enables doorstep cash delivery. The system includes a portal for banking officers to create, verify, and dispatch remittance requests, and a mobile app for riders to pick up cash, perform VBS checks, and deliver to beneficiaries. My responsibilities included gathering client requirements, building secure backend APIs using Node.js with TypeScript and Oracle DB, and integrating third-party APIs for fund transfers and real-time remittance tracking, ensuring the system was reliable, scalable, and secure.

**RAHPER**
*Ride-Sharing App*
Worked on ride-sharing platform, integrating Google Maps for location services and sockets for real-time ride requests and chat. Developed APIs to support seamless interaction between frontend panels and backend services. Worked on frontend panel, implementing the user interface and ensuring a smooth user experience. Developed and integrated APIs for seamless communication between the frontend and backend components.

**Farmkar App/Admin Portal**
*Agriculture Platform*
Developed a platform connecting farmers, lenders, and customers for equipment import/export and related agricultural services, enabling smooth financial and service workflows. Integrated Zindigi Gateway payment APIs to facilitate secure and seamless transactions within the platform, ensuring reliable payment processing for users.

**Autocar**
*Automobile Parts Platform*
Created a website and app for automobile parts listing with an admin portal for management, cash flow tracking, and quotation management. Integrated payment handling systems to enable smooth transactions for parts orders across the platform.

**Leos Broker Application**
Worked as a Full Stack Developer on the Leos Broker App, a comprehensive platform designed to streamline broker operations, user management, and customer interactions. Contributed to both backend and frontend development, building scalable APIs and user-facing features to support business workflows. Integrated Zoho services including Zoho CRM and Zoho Desk to manage customer data, support tickets, and business processes efficiently. Implemented WhatsApp integrations and chatbot/bot solutions to automate customer communication and improve user engagement. Designed and developed automation flows to enhance operational efficiency and reduce manual effort.
Managed cloud infrastructure using AWS, including deployment, monitoring, and performance optimization to ensure system reliability and scalability. Worked on real-time features, database optimization, and secure authentication mechanisms to deliver a robust and high-performing application.
